INTERNATIONAL JOURNAL OF MASS SPECTROMETRY AND ION PROCESSES, VOLUMES 80 AND 81 (1987)

SUBJECT INDEX

The numbers in bold type indicate the volume in which the paper appears.

acetic acid
on the structure of the $C_2H_4O_2$ neutrals (— versus 1,1-dihydroxyethene) generated from ionized *n*-hexanoic acid and *n*-butyl acetate in the gas phase. Implications for the mechanism of the McLafferty rearrangement **81**, 217

acetonitrile detection
stratospheric positive ion composition measurements and —: a consistent picture? **81**, 15

ammonia ions
the effects of isotopic substitution on abstraction reactions of — with hydrogen at very low temperatures **80**, 227

Ar
SIFDT studies of the reactions of N_4^+ ions with H_2, D_2, and — **81**, 235

argon
gas-phase reactions of sulfides, mercaptans, and dimethyl methylphosphonate with ionic species derived from — and water **81**, 227

association reactions
— at low pressure. I. Collision-stabilized association below 1 micron **81**, 247

balloon-borne ACIMS
stratospheric trace gas detection using a new — **81**, 33

bimolecular reactions
rotational effects in complex-forming —: application to the reaction $CH_4 + O_2^+$ **80**, 17

Br^-
dynamics of reactive and non-reactive processes competing in Cl^-, —, I^- collision with H_2 **80**, 211

n-butyl acetate
on the structure of the $C_2H_4O_2$ neutrals (acetic acid versus 1,1-dihydroxyethene) generated from ionized *n*-hexanoic acid and — in the gas phase. Implications for the mechanism of the McLafferty rearrangement **81**, 217

carbene radical anions
formation of —: gas-phase reaction of the atomic oxygen anion with organic neutrals **81**, 147

CH_3^+ ternary association reactions
SIFDT studies of some — **81**, 273

$CH_4 + O_2^+$
rotational effects in complex-forming bimolecular reactions: application to the reaction — **80**, 17

$C_4H_7^+$ ions
structures and heats of formation of — in the gas phase **81**, 165

$CH_3Cl^+ + CH_3Cl \rightarrow CH_4Cl^+ + CH_2Cl$
state-selected ion/molecule reactions by the TESICO technique. XIV. Separation of two microscopic reaction mechanisms in the reaction — **80**, 187

CH_3CN
rate constants and product distributions as functions of temperature for the reaction of $OH^-(H_2O)_{0,1,2}$ with — **81**, 101

CH_3OH
a flowing afterglow-triple quadrupole study of the mechanisms and intermediates in the gas-phase reactions of $CH_3OH_2^+$ with — **81**, 183

$CH_3OH_2^+$
a flowing afterglow-triple quadrupole study of the mechanisms and intermediates in the gas-phase reactions of — with CH_3OH **81**, 183

$C_2H_4O_2$ neutrals
on the structure of the – (acetic acid versus 1,1-dihydroxyethene) generated from ionized *n*-hexanoic acid and *n*-butyl acetate in the gas phase. Implications for the mechanism of the McLafferty rearrangement **81**, 217

CH_2S^-
electron spectroscopy of — **80**, 83

Cl^-
dynamics of reactive and non-reactive

processes competing in —, Br^-, I^- collision with H_2 **80**, 211
Cl^-
ion/molecule association reactions: — addition to SiF_4 in He and N_2 **81**, 259
C_2N^+ ions
selected-ion flow tube studies of reactions of — derived from cyanogen by electron ionization **81**, 123
CO
the reactivity of HOC^+ and the proton affinity of -- at O **80**, 255
collision-stabilized association
association reactions at low pressure. I. — below 1 micron **81**, 247
$C^+(^2P_u)$
the mechanism and product energy disposal in the reaction of — with $O_2(X^3\Sigma_g^-)$ **80**, 133
cyanogen
selected-ion flow tube studies of reactions of C_2N^+ ions derived from — by electron ionization **81**, 123

D_2
SIFDT studies of the reactions of N_4^+ ions with H_2, —, and Ar **81**, 235
1,1-dihydroxyethene
on the structure of the $C_2H_4O_2$ neutrals (acetic acid versus —) generated from ionized *n*-hexanoic acid and *n*-butyl acetate in the gas phase. Implications for the mechanism of the McLafferty rearrangement **81**, 217
dimethyl methylphosphonate
gas-phase reactions of sulfides, mercaptans, and — with ionic species derived from argon and water **81**, 227
dipolar molecules
reaction rates of electrons with — **80**, 31

electrons
microwave afterglow measurements of the dissociative recombination of molecular ions with — **81**, 67
electrons
reaction rates of — with dipolar molecules **80**, 31
ethyl borate
the gas-phase ion chemistry of methyl and — **81**, 203

H_2
SIFDT studies of the reactions of N_4^+ ions with —, D_2, and Ar **81**, 235
He
ion/molecule association reactions: Cl^- addition to SiF_4 in — and N_2 **81**, 259
n-hexanoic acid
on the structure of the $C_2H_4O_2$ neutrals (acetic acid versus 1,1-dihydroxyethene) generated from ionized — and *n*-butyl acetate in the gas phase. Implications for the mechanism of the McLafferty rearrangement **81**, 217
H_3O^-
collision-induced dissociation and charge reversal experiments on — and NH_4^- **80**, 201
HOC^+
the reactivity of — and the proton affinity of CO at O **80**, 255
hydrogen
the effects of isotopic substitution on abstraction reactions of ammonia ions with — at very low temperatures **80**, 227

I^-
dynamics of reactive and non-reactive processes competing in Cl^-, Br^-, — collision with H_2 **80**, 211
interstellar chemistry
some problems in — **81**, 1
ion/molecule reactions
CRESU studies of — **80**, 239

$Kr^{2+} + He \rightarrow Kr^+ + He^+$
crossed-beam investigation of the single-electron charge transfer process — at sub-eV collision energies **80**, 177

McLafferty rearrangement
on the structure of the $C_2H_4O_2$ neutrals (acetic acid versus 1,1-dihydroxyethene) generated from ionized *n*-hexanoic acid and *n*-butyl acetate in the gas phase. Implications for the mechanism of the — **81**, 217
mercaptans
gas-phase reactions of sulfides, —, and dimethyl methylphosphonate with ionic species derived from argon and water **81**, 227
methyl borate
the gas-phase ion chemistry of — and ethyl borates **81**, 203
moleclar ions
microwave afterglow measurements of the dissociative recombination of — with electrons **81**, 67
molecular ions
the role of vibrational excitation of — in collisions with neutrals **80**, 115

N_2
ion/molecule association reactions: Cl^- addition to SiF_4 in He and — **18**, 259

N_2^+
bimodal rotational distributions of — produced in the thermal energy Penning ionization of N_2 by $Ne^*(^3P_2)$ **80**, 63
N_4^+ ions
SIFDT studies of the reactions of — with H_2, D_2, and Ar **81**, 235
$Ne^*(^3P_2)$
bimodal rotational distributions of N_2^+ produced in the thermal energy Penning ionization of N_2 by — **80**, 63
negative ions
mobilities of several mass-identified positive and — in air **81**, 45
neutrals
the role of vibrational excitation of molecular ions in collisions with — **80**, 115
NH_3 and ND_3
vibrational overlap integrals between the neutral and ion states of —: application to the vibrational dependence of the $NH_3^+(v_2) + NH_3(0)$ symmetric charge transfer reaction **80**, 51
NH_4^-
collision-induced dissociation and charge reversal experiments on H_3O^- and — **80**, 201

O
the reactivity of HOC^+ and the proton affinity of CO at — **80**, 255
$OH^-(H_2O)_{0,1,2}$
rate constants and product distributions as functions of temperature for the reaction of — with CH_3CN **81**, 101
organic neutrals
formation of carbene radical anions: gas-phase reaction of the atomic oxygen anion with — **81**, 147
$O^+(^4S) + H_2(D_2, HD) \rightarrow OH^+(OD^+) + H(D)$
translational energy dependence of — from thermal energies to 30 eV c.m. **80**, 153
$O_2(X^3\Sigma_g^-)$
the mechanism and product energy disposal in the reaction of $C^+(^2P_u)$ with — **80**, 133
oxygen
formation of carbene radical anions: gas-phase reaction of the atomic — anion with organic neutrals **81**, 147
polyatomic ions
—: bond energies, most stable isometric form and low excited states **80**, 1
positive ions
mobilities of several mass-identified — and negative ions in air **81**, 45

radiative relaxation
— of vibrationally excited ions **80**, 99

SiF_4
ion/molecule association reactions: Cl^- addition to — in He and N_2 **81**, 259
state-selected ion/molecule reactions
— by the TESICO technique. XIV. Separation of two microscopic reaction mechanisms in the reaction $CH_3Cl^+ + CH_3Cl \rightarrow CH_4Cl^+ + CH_2Cl$ **80**, 187
stratospheric positive ion composition
— measurements and acetonitrile detection: a consistent picture? **81**, 15
stratospheric trace gas detection
— using a new balloon-borne ACIMS method **81**, 33
sulfides
gas-phase reactions of —, mercaptans and dimethyl methylphosphonate with ionic species derived from argon and water **81**, 227

tandem flowing afterglow-SIFT-drift
the — **81**, 85

vibrational excitation
the role of — of molecular ions in collisions with neutrals **80**, 115
vibrational overlap integrals
— between the neutral and ion states of NH_3 and ND_3: application to the vibrational dependence of the $NH_3^+(v_2) + NH_3(0)$ symmetric charge transfer reaction **80**, 51
vibrationally excited ions
radiative relaxation of — **80**, 99

water
gas-phase reactions of sulfides, mercaptans, and dimethyl methylphosphonate with ionic species derived from argon and — **81**, 227
